

35 ABSTRACT

36 A stack of laminated transparent lenses consists of two
37 alternating optically clear materials in intimate contact. The
38 materials are a plastic lens and clear adhesive. The adhesive is
39 uninterrupted. The lens and the adhesive have refraction mismatch
40 of less than 0.2. A tab portion is part of each lens acts as an
41 aid in peeling away the outermost lens after contamination of the
42 lens layer during racing conditions. The lens stack can be
43 mounted to the posts on the face shield or laminated directly to
44 a windshield.
